

New Brunswick General Guidelines For Expected Healing Times

INTRODUCTION

Healing time is the generally expected interval of time for physiological wound repair, following an injury or surgery. Disability time/duration refers to the generally expected maximal interval of time, for a given level of physical job demands (see Disability Duration Guidelines section), within which the worker should have regained pre-accident or pre-surgical functional ability. Healing time is always longer than disability duration time.

When a worker reaches the expected healing time for his/her injury, but continues to be disabled and to complain of pain, he/she should be considered as a potential chronic pain disability sufferer.

There are two sets of tables for expected healing times: General Expected Healing Times and Post-Surgical Healing Times
